Lightweight performance staging for all ages

www.rosehill.co.uk

Ultralight is a flexible modular staging system manufactured by Gopak Ltd, designed using components that can be simply joined together to create a vast number of configurations for performance and presentation. Ultralight is the only system of its kind to have attained both TUV and GS approval in the UK. By buying an Ultralight stage, you can be assured that you are buying the best possible stage in its class.

Components have been engineered to allow flexible assembly, disassembly, configuration and reconfiguration to create the perfect platform for performances or presentations. The design of the integral locking and location mechanism makes assembly quick and easy and a perfect solution for any multi-purpose space. Be it in a school, church, community hall, for weddings, gigs, conferences, in exhibition and shopping centres, for fashion and theatre shows, we have the ideal solution for your needs.

We have created a number of stage packages to help you realise the potential of Ultralight. These packages can be easily reconfigured to create alternative shapes using the same components. The versatility of this design also allows the staging to be tiered for seated or standing choirs, held secure with our custom designed riser clamps. If you are looking for extra height, the stage risers can be joined together with the twist of a riser tube and no loss of structural stability.

Add optional extras for safety and a great finish

To enable the stage to work in all environments we offer optional accessories. Anti-slip plugs combat slippery floors, riser levellers deal with uneven floors and surfaces. Our specially designed storage trolleys hold decks and risers in a safe place and when not in use can be wheeled to the area for assembly, saving time and strain.

Chair stop plates and guardrails may prove to be invaluable safety features for stage users, particularly when the overall height of the stage exceeds 600mm high. Our DDA compliant ramps help with any access issues and why not finish off your stage with a professional touch, by adding valance (skirting) to your stage.

How easy is it to build the stage?

All staging is supplied with clear installation instructions. Unlike many other stage systems, Ultralight can be assembled and disassembled by one or two people, saving time and resources. It is so light that children (with supervision) can be involved in the assembly process. If you need to transport your stage off site, the 1m x 1m stage decks will easily fit into the back of an average sized car. A 5mm Allen key is the only tool required to build your stage and is included free of charge with every order. We do recommend that two people are involved in assembly when using 2m long decks, owing to the lift required.

Sustainability?

Ultralight Staging is built to exacting standards but if you find a parts fail (normally owing to misuse), you can order replacements for simple repair to keep your stage fully functioning for years to come. Aluminium is the major material used for the construction of the stage components and is not only extremely lightweight but infinitely recyclable.

STAGE DECK Maximum Even Load Distribution 1000kg m²

STAGE DECK Maximum Point Load 180kg

How it works

1

Building and taking down an Ultralight stage system is so easy and takes very little time!

2

Fast and efficient assembly

The lightweight aluminium risers concertina to open and close in seconds and can be secured to the stage deck with the twist of an Allen key.

Lightweight but strong

All components are light in weight, reducing the overall weight of the stage without compromising on strength and durability.

Versatile and adaptable

Available in a great selection of sizes and shapes to enable you to create the perfect stage configuration for your performance or event.

Build Your Own Stage

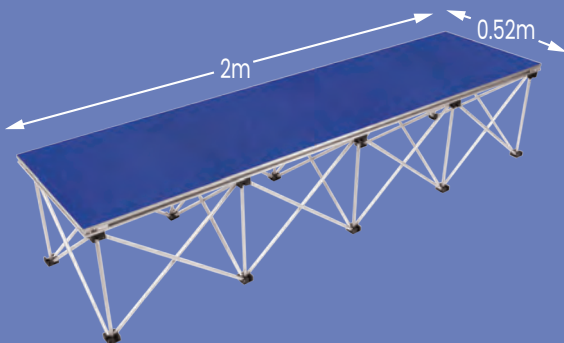

UL/AB605 Deck & Riser

The largest and most popular size deck available, a 2 x 1m can be used to create a good size of stage with minimum effort.

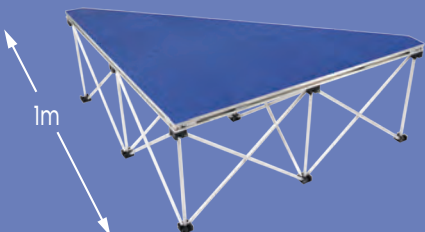

UL/AC605 Deck & Riser

A useful size to create slim catwalks or wide steps.

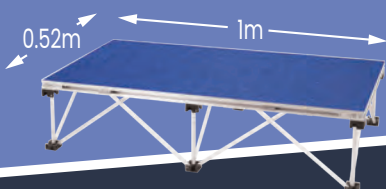

UL/BD605 Triangle Deck & Riser

Give your stage a great look with triangular edges.

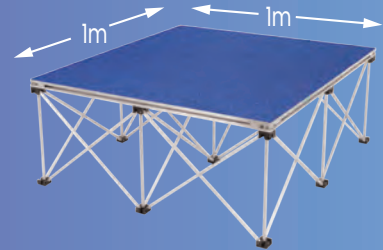

UL/BC605 Deck & Riser

Recommended to create wide steps.

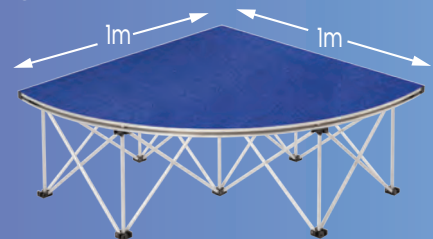

UL/BB605 Deck & Riser

Another popular size this deck can easily be handled by one person and is small enough to fit in a family car.

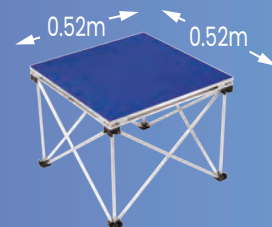

UL/BH605 Quadrant Deck & Riser

Add curves to your stage frontage, create semi-circles or round staging.

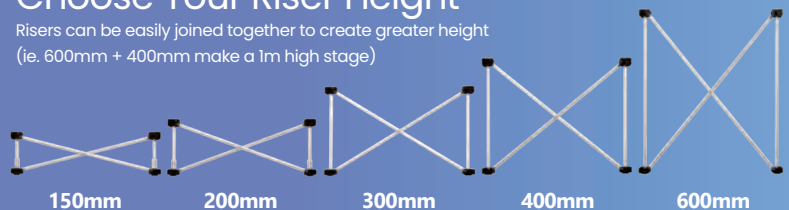

UL/CC605 Deck & Riser

A small size deck for when you need a step in a limited space.

Choose Your Riser Height

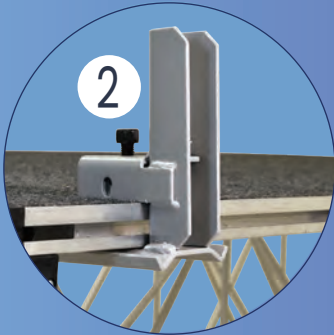

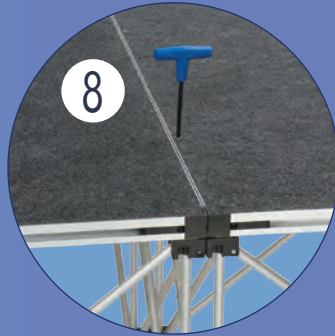

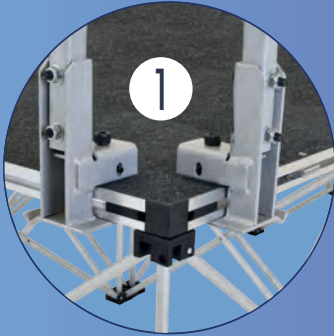

Risers can be easily joined together to create greater height (ie. 600mm + 400mm make a 1m high stage)

Select the stage covering of your choice

Safety & Storage

- 1 Ultralight corner brackets
For fitting guardrails at corners
- 2 Ultralight straight brackets
For fitting guardrail to stage decks
- 3 Ultralight stage guardrails
Available in 2m & 1m lengths
- 4 Ultralight narrow steps
When floor space is limited
- 5 Ultralight wide steps
Recommended for children and catwalks
- 6 Ultralight chair stop plates
Available in 2m, 1m & 0.5m lengths
- 7 Ultralight valance
Available in 4 colours
- 8 5mm Allen Key
Supplied free of charge with every order
- 9 Large Storage Trolley
Holds up to 10 x 2x1m decks & risers
- 10 Small Storage Trolley
Holds up to 10 x 1x1m decks & risers
